Technology Partners

Technology Partners are experts in data protection, backup and recovery. We provide the highest level of service to our clients, ensuring their data is always protected, accessible, and secure. This means that their solution includes encryption, offsite backup, and is constantly tested to ensure it works. Our Absolute Data Recovery system is built around this premise. Data is the lifeblood of any business but all too often you don't have the time or expertise to make sure it's safe. This is why you need a team dedicated to protecting your data with a proven and continuously tested backup and recovery system. You need the peace of mind only Technology Partners can provide. Backing up the data is only half of the

equation. It doesn't matter how well the data is backed up if you can't quickly access that data and retrieve it once you have a loss. This is why Technology Partners is proud to offer the industry's easiest data restoration procedure. At Technology Partners, we are dedicated to helping our clients recover from any type of data loss. When your data goes missing or your systems go down, we're just a phone call away. Our mission is to ensure that our clients' data is always "protected, accessible, and secure." This mission statement is engrained in everything we do from the design of our services to the mindset of every employee of the company.

FORESITE

ForeSite has been providing solutions for technology problems since 1997 through the IT division which provides everything from help desk, to network maintenance, projects and technology planning, and the Development division which focuses on designing and developing effective custom websites and applications.

We strive to be a true technology partner to our clients, whether we are acting as their full IT Department or as a valuable supplemental resource for their internal IT staff. Our clients are a mix of nonprofit and for profit organizations ranging from 5-10 person offices to Fortune 500 companies.

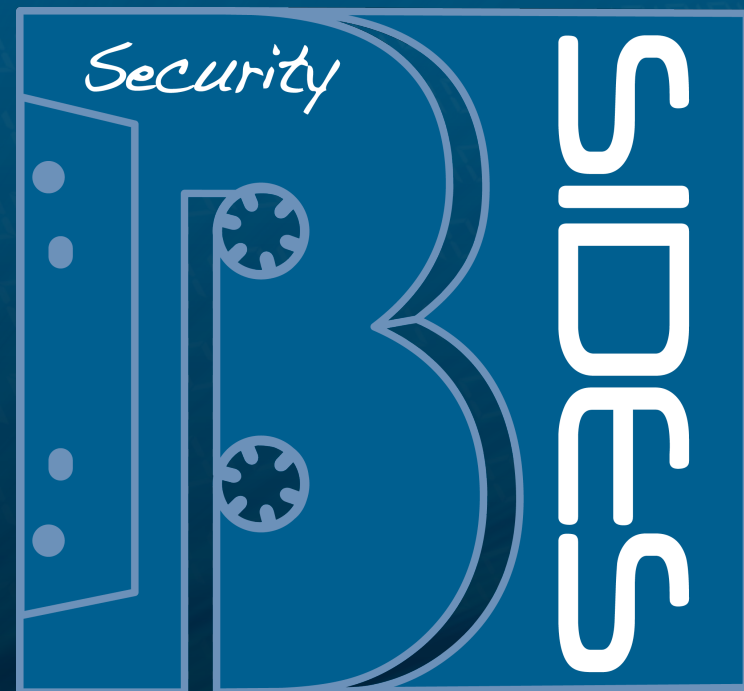

new england
society of information
& technology

NESIT is an independent nonprofit corporation that provides physical gathering space, a workshop, and tools for collaborative and educational projects. The NESIT mission is to foster collaborative learning in science and technology. We do this by providing members a place to explore

technical and creative projects, by hosting frequent, high quality and technical public workshops, by teaching computer basics to the general public via free computer clinics, and by building a community of makers and hackers that thrive on sharing their knowledge.

BSides was born out of number of rejections to the CFP for Black Hat USA 2009. A number of quality speakers were rejected, not due to lack of quality but lack of space and time. Any constrained system must operate within the bounds to which it has defined itself. Conferences constrain themselves to the eight hours a day for however many days they run. Our goal is to provide people with options by removing those barriers and providing more options for speakers, topics, and events.

Much like Noisebridge, and other hacker spaces, we are a do-acracy; in other words, if you want it, then you do it or make it happen. We do not have members, but rather participants. You are the "we" and we can only be successful if you make that happen for yourself.
